

Website Traffic Growth Pack

Version 1.1 | October 10, 2026 | <https://websitesitetraffic.live/digital-pack.html>

Start with one audience, one useful offer, and one primary channel. Use this pack for your own business or client work. The templates are original Website Traffic materials; no third-party software license is included. You may adapt the templates for your work. Please share the original download link rather than reselling this pack unchanged.

Your first 25 minutes

1. Open 02-growth-workbook.html in a browser. It works offline. Enter your audience, offer, landing page and primary channel.
2. Choose one outcome: a qualified inquiry, a subscriber who requested your emails, or a sale. Define what counts before measuring.
3. Record your starting point, even when the answer is "not measured yet." A blank is not zero.
4. Complete days 1-3. You do not need to finish every worksheet before publishing one useful thing.
5. Export your workbook backup after each work session. The downloaded HTML is a blank template; your edits live in browser storage, not inside that original file. Import your backup when changing browsers or devices. File-based browser storage support varies.

Choose your workspace

- Plan: <https://websitetraffic.live/traffic-planner.html>
- Research keywords: <https://websitetraffic.live/keyword-research.html>
- Check SEO foundations: <https://websitetraffic.live/seo-dashboard.html>
- Find communities and experiments: <https://websitetraffic.live/growth-loop.html>
- Create campaign copy and PNG artwork: <https://websitetraffic.live/campaign-studio.html>
- Review Search Console / GA4 exports: <https://websitetraffic.live/evidence-center.html>

Weekly rhythm

Monday: choose one task and name its success measure. During the week: publish, distribute respectfully, and record what happened. Friday: compare the result with your baseline and decide to repeat, revise or stop. Thirty days is a work schedule, not a promise of rankings, traffic, or revenue.

What the pack does

Planning, editable prompts, checklists, email drafts, distribution ideas and a printable workbook. It does not crawl sites, publish posts, send email, buy ads or retrieve live keyword metrics. The online tools may offer optional connected features; this pack works without them. Never paste customer lists, passwords or private client data into an AI prompt.
